
Specification
16-row transition table; each rule marked requirement or convention
Five implementations
C (enum)
C++17 (enum class)
C++17 (type-level)
Haskell (ADTs)
Haskell + crem
Defect injection
six classes D1–D6, one defect per variant, from a clean baseline
Mechanisms
compiler (3 warning levels), static analyser, type checker, exhaustive test of 16 pairs
Outcome per cell
rejected
warned
silent
detected by test
